

## Installing Trace as an 'app' on an Apple device

Whilst Trace is a web-based application and can be used on a computer, tablet or smartphone, for ease of access you can make Trace an icon on your iPhone or iPad as if it were an app.

1. Launch safari (*web browser*) and go to **ci.tracemarine.org**
2. Once the page loads click the **square with vertical arrow** icon on the bottom of the page (*if it does not appear just tap near the bottom of the page*)

3. A new menu will show, scroll until you see **'Add to Home Screen'** and tap this

4. A shortcut menu will appear, select **'Add'** (*top right*)
5. An icon will now show on your phone screen and Trace will function as an app

To close it or reset, just flick up from the bottom of the screen and swipe it up to the top. We recommend doing this to ensure new features display.
