

Ports of Jersey Environmental Policy Statement

This statement is Ports of Jersey's commitment to leading and supporting a long-term sustainable future, acknowledging that we have a responsibility to manage and minimise adverse impacts resulting from business activities, products and services.

We have set the scope of this commitment to capture business activities, services and locations directly under our control. Our activities are primarily Aviation and Maritime supporting operations, with estate in 9 of the 12 parishes of Jersey. We acknowledge there are activities outside of this scope, which we can influence and will seek collaboration from stakeholders to operate to the principles within this commitment.

Ports of Jersey will:

- Comply with all legal related legislations, and look to exceed requirements where possible
- Commit to reducing emissions
- Minimise consumption and waste produced from our operations, preventing pollution to Jersey's land, air, surrounding waters and associated biodiversity
- Optimise energy and natural resource use
- Drive continual improvement with respects to our environmental impacts

Ports of Jersey will meet these commitments by:

- Measuring and prioritising key environmental aspects of all areas within the business
- Providing public written evidence of our commitment to reduce emissions, energy efficiency, and develop a framework for meeting the programme's requirements
- Implementing Environmental Management Systems (EMS) specific to Aviation and Maritime functions that enables the business to manage its risks around regulatory compliance, operational resilience, and corporate reputation to create a framework for continual improvement
- Setting, monitoring and reporting against clearly defined targets
- Assigning appropriate management responsibility for oversight, review and revision of the EMS
- Implementing a sustainable procurement policy which accounts for key material suppliers, products and services
- Provide training, communicate and consult with staff, government and community stakeholders to ensure a high level of transparency and that relevant social and economic factors are accounted for
- Encourage, enable and engage with stakeholders to support and influence the community

We review this policy at least annually to ensure it is documented, implemented and maintained.

We will set and review annual targets based on the findings of the environmental reports.
